ICT SERVICES

WK IT Management Services (ITMS)

Female-led

ABOUT

We are a Managed Service Provider offering services such as: network design, server management, cloud solutions, cybersecurity, backup and disaster recovery, systems management, and proactive IT support. Through Service Level Agreements (SLAs), we help organizations keep their IT environment secure, stable, and efficient. Our core activities also include the supply, implementation, and support of time registration and access control systems based on fingerprint, facial recognition, and palm technology. These systems are delivered with both cloud-based and locally installed software, allowing organizations to efficiently manage staff attendance, working hours, access rights, and reporting. In addition, ITMS implements ERP solutions based on Odoo, enabling companies to digitize and integrate their business processes. These solutions include sales, purchasing, inventory management, rental management, HR, CRM, accounting, reporting, and custom-built modules. Our ERP systems are tailored to the client's business processes. The company also offers professional web services, including the design, development, and maintenance of business websites, web applications, and online portals. Alongside these services, ITMS supplies and supports additional security and automation solutions, including CCTV camera systems, access control, biometric identification systems, and related ICT infrastructure.
