EQUIPMENT SERVICING

RL Tech installaties

ABOUT

Our Focus: Continuity and Healthy Air Quality: Within the oil and gas industry, a healthy and safe working environment is crucial. Our maintenance program is therefore specifically designed around indoor environment and air quality (Indoor Air Quality).
Energy efficiency: Deep Cleaning & Disinfection: Thorough cleaning of evaporators, filters, and condensate trays to eliminate mold, bacteria, and fine particulate matter, ensuring a healthy indoor climate and less sick leave. Preventive Maintenance: Periodic inspection of refrigerant pressure, electrotechnical components, and inverter systems to prevent acute failures (downtime) in offices and homes. Optimized Energy Consumption: By keeping systems technically clean, we guarantee maximum cooling efficiency and lower operational energy costs (OPEX). Why RLTech? As an experienced local partner (Local Content), we work according to strict safety and quality guidelines. We ensure that your air conditioning systems not only cool optimally, but also deliver clean, healthy air for your staff and expats.
