ARCHITECTS SURVEYORS ENVIRONMENTAL

Environmental Services & Support NV (ESS)

Female-led

ABOUT

Sustainable forest management and certification, baseline, environmental impact and monitoring studies. Development projects require that the baseline situation be assessed before the start of the project, that the impact on the biophysical and social environment be predicted and monitored, and that the environmental costs and benefits be known. Knowledge is needed about measures to reduce negative effects and enhance positive effects. ESS carries out baseline and impact assessment studies related to, for example, mining, energy, agriculture, forestry and transport development projects. Valuation of intangible resources, training, information provision and publications. Performance and results depend on well-trained people equipped for their tasks. Training and information provision help to stay up to date with developments in various fields. ESS provides assistance in the tailored design and organization of training and information sessions, at least in the context of the forestry and environmental sectors. ESS also contributes to education and awareness through the publication of information related to ecology and the environment, in collaboration with other organizations. Plan, policy and project development, project management, fundraising and recruitment. Within the context of the forestry and environmental sector, ESS can take on the responsibility of project manager on behalf of its clients.
